

MICHAEL ALUSA LIMISI

Support Systems Engineer | AI Workflow Automation, API, and Operations

Nairobi, Kenya. Find me on [LinkedIn](#), [GitHub](#), and [my Portfolio](#). Email: michaellimisi7@gmail.com!

PROFESSIONAL SUMMARY

Support Systems Engineer with 8+ years of experience spanning customer support, software systems, API troubleshooting, and AI-agentic workflow automation. Skilled at bridging customers, operations, and engineering teams to diagnose complex issues, improve processes, and build scalable operational systems. Experienced in designing and building AI Agentic systems and AI-assisted workflows, automation tools, and knowledge systems that reduce manual effort, accelerate resolution times, and improve business efficiency.

SKILLS & TOOLS

- **Technical Support & Diagnostics:** API Troubleshooting, Log Analysis, Root Cause Analysis, Webhooks, PostgreSQL, SQL, AWS CloudWatch
- **AI & Automation:** LLM Workflow Design, Agentic Systems, Model Context Protocol (MCP), AI Integrations, Workflow Automation, Prompt Engineering, OpenAI API, Claude Code, [Make.com](#), Claude, ChatGPT, Gemini
- **Engineering & Tools:** Python, REST APIs, Postman, JavaScript, Git/GitHub
- **Support Systems & Operations:** Zendesk, Intercom, Jira, Notion, SLA Management, Knowledge Base Systems
- **Business & Operational Systems:** Process Optimization, Systems Design, Workflow Mapping, Cross-Functional Collaboration, Technical Documentation, Operational Automation

WORK EXPERIENCE

Technical Support Engineer at Arucy Enterprises, Nairobi, Kenya | June 2024 – Present

- Reduced support ticket volume through proactive API, webhook, and integration troubleshooting, identifying recurring failure patterns before escalation.
- Independently identified repetitive support bottlenecks and designed an AI-powered ticket triage and knowledge extraction system using LLMs, APIs, and workflow automation, reducing manual investigation effort and improving support team efficiency.
- Built AI-assisted operational workflows that accelerated root-cause analysis and transformed support insights into reusable organizational knowledge.
- Managed complex Stripe billing disputes and customer escalations while maintaining 95% CSAT and SLA compliance.
- Created automation tools, SOPs, and knowledge systems in Notion that enabled the

support organization to scale 5x without proportional hiring.

- Leveraged AWS CloudWatch, logs, and monitoring tools to proactively identify issues across a platform serving over one million users.
- Served as the technical liaison between Support, Engineering, and Operations teams, translating complex technical findings into actionable business recommendations and driving issue resolution across stakeholders.
- Designed and deployed AI workflows integrating LLMs, APIs, and MCP-based architectures to transform unstructured operational data into actionable business knowledge.
- Analyzed support and platform performance data to identify recurring issues, producing actionable reports that informed engineering and operational decisions.

Software Developer at iTalanta, Nairobi, Kenya | Oct 2023 – Apr 2024

- Optimized database queries and application performance, improving response times by 30% and enhancing overall platform reliability.
- Collaborated with Product, Support, and Engineering teams to refine features, troubleshoot production issues, and improve customer-facing functionality before release.
- Created and maintained troubleshooting documentation and operational guides, enabling faster issue resolution and increased self-service adoption among users and support teams.
- Supported customer onboarding and migration initiatives, implementing monitoring and validation processes that minimized downtime and reduced operational risk.
- Worked with APIs, databases, and application logs to diagnose defects, validate fixes, and improve system stability

Senior Jewelry Consultant & Gem Expert at CustomMade, Massachusetts, USA (Remote) | June 2018 – Aug 2024

- Managed high-value customer projects from consultation through delivery, maintaining exceptional client satisfaction while coordinating across design, production, and operations teams.
- Served as the primary point of contact for complex customer concerns, resolving sensitive issues through clear communication, expectation management, and structured problem-solving.
- Translated ambiguous customer requirements into detailed technical specifications and project plans, improving stakeholder alignment and reducing delivery rework.
- Investigated and resolved complex order, production, and quality-related issues through root-cause analysis and cross-functional collaboration.
- Created documentation and process improvements that streamlined communication between customers and internal teams, improving operational efficiency and project execution.
- Consistently balanced multiple concurrent customer engagements while maintaining service quality, responsiveness, and attention to detail.

Selected AI Automations & Support Systems

- Conceived, designed, and built a multi-agent AI platform leveraging Python, LLM orchestration, MCP-compatible tool integrations, structured memory systems, and workflow automation to identify prospect pain points across Reddit, LinkedIn, company websites, and job postings. The platform autonomously researches opportunities, evaluates urgency, generates personalized outreach, updates CRM systems, and produces executive reporting for sales operations.
- Designed an AI-assisted Support Engineering Training System that simulates live support operations, customer queues, issue reproduction environments, and escalation workflows, helping accelerate onboarding and improve troubleshooting readiness.
- Designed and implemented a Support Intelligence Engine that transforms unstructured customer requests into structured diagnostic workflows, root-cause hypotheses, and recommended resolution paths, improving troubleshooting consistency and reducing investigation time.
- Built an AI-powered Knowledge Builder that converts unstructured support conversations into reusable operational knowledge, reducing documentation effort and improving knowledge reuse across teams.

EDUCATION

- Certificate in Software Development from Moringa School, Nairobi (Feb 2023 – Nov 2023)
- B.Eng. in Electrical Engineering & Electronics from NIT Warangal, India (Jan 2012 – Apr 2016)
